

DZAKY RIZHA ANARGYA

Computer Science, Intelligent Systems

+6281333556696 | rizhadzaky@gmail.com | linkedin.com/in/dzakyrizha | github.com/kacangdisko

SUMMARY

Third-year Computer Science undergraduate at Bina Nusantara University, concentrating in Intelligent Systems. Familiar across the machine learning workflow, from dataset construction and controlled experiments through to deployed applications. Author of two conference papers on parameter-efficient fine-tuning and representation learning for medical imaging. Also active in student leadership, currently leading a 152-person education commission across seven campuses.

EDUCATION

Bina Nusantara University

Bachelor of Computer Science, Intelligent Systems — GPA 3.51 / 4.00

Jakarta, Indonesia

August 2024 – Expected 2028

SMA Telkom Bandung

Mathematics and Science Track

Bandung, Indonesia

July 2021 – June 2024

PROJECTS

Boomer to Gen Alpha Style Transfer | *Project Lead, Dataset Generation, Experimentation*

2026

- Built a 24,885-pair parallel English corpus using a Gemini 2.5 Flash Lite generation pipeline, then fine-tuned and benchmarked five encoder-decoder models across the T5, FLAN-T5, and BART families on generational style transfer. Team of 3.
- Owned dataset design and the fine-tuning experiments under a fixed training configuration; **bart-base** led on held-out test data (19.20 BLEU, 41.67 chrF, 0.446 ROUGE-L) and scored 3.17/4 on fluency in a 10-rater human evaluation. Deployed the winning model as a public Hugging Face Space.
- github.com/kacangdisko/styletransfer-nlp

BanSos: Flood Risk and Community Reporting Platform | *Project Leader, Ideator, Risk Model*

2026

- Designed the coordinate-based risk scoring logic in Python with pandas, GeoPandas, and Shapely, combining rainfall forecasts, water level readings, and administrative boundaries into a per-location risk score. Team of 4.
- Led product direction and coordinated five Agile sprints across the team's FastAPI backend, React and TypeScript frontend, and Supabase data layer, with Docker and GitHub Actions CI/CD
- github.com/BansosSoftwareEngineering/BanSos

BurnoutCheck: Developer Burnout Prediction | *Experimentation, UI Design, Report Writing*

2026

- Built a privacy-conscious web tool predicting developer burnout risk from daily work and lifestyle inputs. A soft-voting ensemble of six classical models reached 80.8% accuracy and 0.804 macro F1, about 3 points above the strongest individual model. Team of 4.
- Ran model experimentation, designed the React and Tailwind interface with dynamic UI states, and authored the final project report.

RESEARCH

Low-Rank Adaptation Provides a Parameter-Efficient Trade-Off for Low-Data Medical Imaging

ICISS 2026

- Compared LoRA (ranks 4, 8, 16), DoRA, AdaLoRA, linear probing, and full fine-tuning for adapting a pretrained Vision Transformer to BreastMNIST breast ultrasound classification, as part of a seven-person research team.
- Designed the experimental methodology and ran the controlled comparisons; LoRA at rank 8 retained 90.3% of full fine-tuning ROC-AUC while updating only 0.35% of model parameters.

A Classifier Controlled Study of Richer Visual Representations for MedMNIST Classification

ICIMTech 2026

- Benchmarked three representation families (PCA, convolutional autoencoder, and frozen MAE-pretrained Vision Transformers at three scales) across four MedMNIST datasets under a fixed downstream MLP classifier, in a five-person research team.
- Designed the methodology and produced the result visualisations; MAE-ViT representations led on complex multi-class tasks (93.47% on PathMNIST) while simpler baselines stayed competitive on binary tasks.

TECHNICAL SKILLS

Languages: Python, SQL, C, Java, JavaScript, TypeScript
Machine Learning: PyTorch, TensorFlow, Transformers, Vision Transformers, LoRA / PEFT, seq2seq fine-tuning
Data: pandas, NumPy, matplotlib, seaborn, GeoPandas
Engineering: FastAPI, React, Tailwind CSS, Git, GitHub Actions
Design: Figma
Spoken Languages: Bahasa Indonesia (Native), English (Professional working proficiency)

LEADERSHIP AND ORGANISATIONAL EXPERIENCE

General Manager of Education February 2026 – Present
Himpunan Mahasiswa Teknik Informatika (HIMTI)

- Lead an Education commission of 152 activists across 7 regional campuses (Kemanggisan, Alam Sutera, Bekasi, Bandung, Semarang, Malang, and Medan).
- Plan and oversee all academic event categories, including company visits, seminars, workshops, community outreach (PKM), and webinars, coordinating timelines with regional teams.

Freshmen Leader and Freshmen Partner August 2025 – August 2026
Bina Nusantara University

- Guide new students through orientation and their first-year transition, supporting academic and social adaptation through mentoring and regular check-ins.

Secretary, Pengabdian Kepada Masyarakat 2025 July 2025 – October 2025
Himpunan Mahasiswa Teknik Informatika (HIMTI)

- Drafted official correspondence, event proposals, and partnership letters, and kept communication flowing between internal committees and external institutions.

Coordinator, Domestic Study Tour (HISHOT 2025) March 2025 – October 2025
Himpunan Mahasiswa Teknik Informatika (HIMTI)

- Led a 4-person team organising an academic study tour to Garena Indonesia, securing the partnership and managing logistics, scheduling, and participant coordination.

CERTIFICATIONS AND VOLUNTEERING

Data Analysis Course | *Udemy* September 2026

Azure AI Fundamentals | *Microsoft* March 2026

Event Division Volunteer | *International Collegiate Programming Contest Asia Jakarta 2025* November 2025

Building Conversational AI Applications | *NVIDIA* August 2025
